ż

AMENDED IN COMMITTEE 5/20/2024 RESOLUTION NO. 326-24

FILE NO. 240270

[Affirming Support for SFMTA and SFE, in Partnership with Public Works, SFPUC, and SFCTA to Expediently Implement Curbside Electric Vehicle Charging Feasibility Study and Pilot Program]

Resolution affirming support of the San Francisco Municipal Transportation Agency (SFMTA) and San Francisco Environment Department (SFE) in their work with Public Works, San Francisco Public Utilities Commission (SFPUC), San Francisco County Transportation Authority (SFCTA), climate and transportation advocates, equity groups, and other relevant agencies and stakeholders to expediently implement the Curbside Electric Vehicle (EV) Charging Feasibility Study; and requesting a report containing recommendations, cost estimates, and funding strategies for a Curbside EV Charging Pilot Program before the end of 2024.

WHEREAS, Climate change poses immediate and extraordinary threats to ecosystems, economy, and public health in San Francisco and beyond; and

WHEREAS, July 2023 marked the hottest month in global human history, and San Francisco's average temperature has increased by 2.9°C (5.22 °F) since 1970 due to rapidly rising global greenhouse gas emissions; and

WHEREAS, Climate change not only poses significant economic threats, but also impacts community health and welfare; and

WHEREAS, The Los Angeles Times reported that 3,900 Californians died from
 extreme heat exposure between 2010 and 2019, and the San Francisco Department of Public
 Health Climate and Health Adaptation Framework highlights that these climate-driven health
 impacts disproportionately affect low-income communities of color in San Francisco; and

WHEREAS, The transportation sector accounts for approximately one quarter of globalgreenhouse gas emissions, is the largest source of carbon dioxide emissions in the US with

motor vehicles producing 83% of these emissions, and accounts for 47% of San Francisco's emissions; and

WHEREAS, The City and County of San Francisco (City) has a transit first policy and recognizes the critical role of transit, walking and bicycling in reducing emissions which simultaneously generate important health, safety and economic benefits; and

6 WHEREAS, The City has already committed to reach net zero greenhouse gas
7 emissions by 2040 with an interim target of cutting emissions 61% below 1990 levels by 2030;
8 and

WHEREAS, On September 23, 2020, California Governor Gavin Newsom signed
Executive Order N-79-20, which mandates that 100 % of in-state sales of new passenger cars
and trucks are zero-emission by 2035, a target that would achieve more than a 35% reduction
in greenhouse gas emissions and an 80% improvement in oxides of nitrogen emissions from
cars statewide; and

WHEREAS, The City has also set a goal that 25% of all registered private vehicles be
electric by 2030 and it is crucial that the City expand access to affordable and convenient
charging options to meet this benchmark; and

WHEREAS, Zero emission vehicle sales accounted for 37.4% of annual vehicle sales
in the City in 2023, more than four times the US average of 7.6%; and

WHEREAS, The percentage of Electric Vehicle (EV) ownership is expected to increase
with fully-electric and hybrid vehicles representing 50% of new retail vehicle registrations in
San Francisco in March 2023, nearly tripling the national average and making San Francisco
the first U.S. metro area to reach this milestone; and

WHEREAS, The Bay Area's hybrid share is 15.8%, six percentage points above the
U.S. average, and with approximately 500,000 commuters driving into San Francisco daily,
the City's EV charging infrastructure must also meet the needs of these drivers; and

5

WHEREAS, nearly 70% of San Francisco residents reside in multi-dwelling units and most do not have access to off-street parking or home charging, including one-third of vehicles (157,000 cars) that are registered for parking at multi-unit dwellings, and an additional third of all registered vehicles (128,000 cars) that are street-parked without private garage or driveway access; and

WHEREAS, San Francisco's approximately 1,193 public charging ports equate to only 0.04 public ports per EV currently registered in the City, not accounting for commuters or visitors who drive EVs; and

9 WHEREAS, San Francisco needs over 5,000 public and workplace chargers to support
 10 EVs by 2030; and

WHEREAS, The City's EV Roadmap, published in 2019, does not fully address how
the supply of public chargers will meet increasing demand. The study assesses that the
charging needs of street-parked EVs can be met by workplace charging infrastructure or at
publicly available charging networks, although concerns have been raised regarding
availability and accessibility of publicly accessible off-street EV charging stations; and

WHEREAS, Public EV Charger access is lower in Black and Hispanic majority
 neighborhoods and areas with below-median household incomes in California, with more
 pronounced public charger access disparities in areas with a higher proportion of multi-unit
 housing; and

WHEREAS, Other cities leading on addressing the climate crisis have ambitious EV
charging plans, including the City of Los Angeles, which as of March 2022 installed 16,749
Level 2 EV chargers and aims to create a network of 44,000 Level 2 EV chargers by 2025
and 120,000 by 2030; and

Supervisors Mandelman; Melgar **BOARD OF SUPERVISORS**

WHEREAS, Cities such as New York City have implemented curbside EV charging pilots with promising results, such as the installation of 100 Level 2 EV curbside chargers in 2021 with 81% charger efficiency and 99.9% charger uptime; and

WHEREAS, In light of the need for expanded public EV charging infrastructure in San Francisco, the Municipal Transportation Agency (SFMTA) and San Francisco Environment Department (SFE), in partnership with Public Works, San Francisco Public Utilities Commission (SFPUC), and San Francisco County Transportation Authority (SFCTA), have committed to jointly collaborating on a Curbside EV Charging Feasibility Study, which would evaluate the feasibility of installing, operating and maintaining public charging infrastructure at the curb in selected locations in San Francisco, develop a framework for a Curbside EV Charging Pilot Program that can be implemented shortly after the conclusion of the study, and both establish and leverage strong working relationships with private sector partners and key City departments to establish the pilot framework; and

WHEREAS, The final deliverable for the Curbside EV Charging Feasibility Study will be a pilot program framework that identifies key components, cost estimates, and parameters necessary for implementation of a future pilot beginning in 2025; now, therefore, be it

RESOLVED, That the Board of Supervisors of the City and County of San Francisco do 17 hereby support the efforts of SFMTA and SFE in partnership with Public Works, SFPUC, and 18 SFCTA, to expediently implement the Curbside Charging Feasibility Study, and request that 19 SFMTA and SFE submit a report containing recommendations, cost estimates, and funding 20 21 strategies for a Curbside EV Charging Pilot Program that is meaningful in scope, spans across multiple neighborhoods throughout San Francisco, and sets a foundation for 22 23 deployment of EV curbside charging infrastructure Citywide, before the end of 2024 to the 24 Board of Supervisors; and, be it

FURTHER RESOLVED, That the San Francisco Board of Supervisors affirms support of the SFMTA and SFE, in partnership with Public Works, SFPUC, and SFCTA to build in equity considerations, as well as clear data-monitoring and reporting processes, into the Curbside EV Charging Pilot Program, and provide regular updates to the Board of Supervisors; and, be it

FURTHER RESOLVED, That these EV curbside chargers are intended exclusively for the public benefit and not intended for commercial uses; and, be it

FURTHER RESOLVED, That the San Francisco Board of Supervisors urges the Office of the Mayor and SFCTA to work with relevant City departments and leverage all available sources of local, state, and federal funding to implement a Curbside EV Charging Pilot Program beginning in 2025.

File Number: 240270

Date Passed: June 04, 2024

Resolution affirming support of the San Francisco Municipal Transportation Agency (SFMTA) and San Francisco Environment Department (SFE) in their work with Public Works, San Francisco Public Utilities Commission (SFPUC), San Francisco County Transportation Authority (SFCTA), climate and transportation advocates, equity groups, and other relevant agencies and stakeholders to expediently implement the Curbside Electric Vehicle (EV) Charging Feasibility Study; and requesting a report containing recommendations, cost estimates, and funding strategies for a Curbside EV Charging Pilot Program before the end of 2024.

May 20, 2024 Land Use and Transportation Committee - AMENDED, AN AMENDMENT OF THE WHOLE BEARING NEW TITLE

May 20, 2024 Land Use and Transportation Committee - RECOMMENDED AS AMENDED

June 04, 2024 Board of Supervisors - ADOPTED

Ayes: 11 - Chan, Dorsey, Engardio, Mandelman, Melgar, Peskin, Preston, Ronen, Safai, Stefani and Walton

File No. 240270

I hereby certify that the foregoing Resolution was ADOPTED on 6/4/2024 by the Board of Supervisors of the City and County of San Francisco.

Angela Calvillo Clerk of the Board
